

Vladimir Matiasevich

Product Engineer | Full-Stack, R&D & Systems Engineering | Complex Process Automation Across Software, Media & Hardware | AI Agent Tooling

Location: Buenos Aires, Argentina (GMT-3)
Open to new opportunities. Remote · available across time zones.
Languages: Russian (native) · English (written and async) · Spanish (A1, actively learning) · Multilingual voice meetings: simultaneous AI interpretation
15+ years in software development and engineering R&D
Online CV: https://makerdrive.github.io/cv/?lang=en

Professional summary

Product engineer with 15+ years in software development and engineering R&D.

I design and develop automation loops for complex processes and systems across domains at the intersection of software, media, and hardware.

Engagement: I work remotely, either independently as a hands-on lead or senior individual contributor, or by integrating the RND-PRO team into the client project for broader-scope work.

Expertise

- **Loop automation and MCP/WebMCP engineering**: MCP/WebMCP, context engineering, RAG/GraphRAG, planning, execution, evals, explicit transitions and completion criteria, retry/replan, guardrails, observability, model/resource routing, multi-agent orchestration, and audit gates.
- **Full-stack**: JavaScript/Node.js, Web/PWA/Web Components, APIs/PostgreSQL/WebSockets, PM2/nginx, tunnels and deployment; SMM and digital presence automation.
- **Applied R&D and technical leadership**: research, architecture, prototypes, field validation, clear ownership, documented context, review gates, repeatable verification, and team and contractor coordination.
- **Hardware and process automation**: JavaScript/Espruino, GSM modems, serial/AT commands, photogrammetry, controlled lighting and motion, physical prototypes, and field operation.

Outcomes

- **Loop automation tooling**: built reusable MCP/WebMCP tools for context retrieval, planning, execution, evals, resource-aware orchestration, guardrails, observability, and verifiable results.
- **Museum high-detail 3D scanning**: developed OBJET.art / ArtClub technology and equipment used at the State Hermitage, Kunstkamera, other museums, and private collections; helped train and scale the 3D team.
- **Hardware projects**: created open-source PhotoPizza and commercial ComplexScan/AUTOBOX; built prototypes and early units; coordinated contractor and small-batch fabrication, testing, protective packaging, export documents, and international delivery.
- **MEGAVISOR / Gate9**: developed rapid automated photo-360 capture technology and equipment for warehouses and stores; led Gate9 studio workflows, contributed to player functionality, and later continued the control-software line in JavaScript/Espruino.

Products and systems

R&D is the shared method: domain research, prototyping, integration, field validation, and operation.

Loop automation tooling and software platforms

Agent Portal / MCP-WebMCP toolchain

A thin host for portable workspaces (Workspace-as-Config) and infrastructure for loop automation: Project Graph, agent pools, routing, evals, and verifiable execution.

Symbiote Workspace / UI / Engine / Node

My product line: an AI-driven constructor for task-adaptive workspaces, reusable UI, executable process graphs, and runtimes.

Symbiote Video Studio

AI-assisted video production workspace with editing interfaces and automation workflows.

Lifecycle Messaging Platform

APIs, PostgreSQL, WebSockets, PM2/nginx, GSM modems, serial/AT control, and process automation.

Media, 3D, and hardware

ComplexScan / AUTOBOX

Commercial automated-capture and high-detail 3D-scanning equipment and museum workflows.

PhotoPizza

Open-source turntable and control systems built with JavaScript/Espruino for photo-360 and photogrammetry.

OBJET.art / ArtClub Digital Heritage

Museum-object digitization and a platform for storing, presenting, and publishing digitized objects.

BoothBot

Automated wine-bottle catalog photography with controlled light and camera motion.

Professional experience

RND-PRO — Lead R&D Engineer · Jan 2023–present

Applied R&D for loop automation, MCP/WebMCP tooling, and full-stack platforms. Previously: Full-Stack Product Engineer, Jan 2020–Dec 2022.

Projects: Agent Portal / MCP-WebMCP toolchain · Symbiote Workspace / UI / Engine / Node · Symbiote Video Studio · Lifecycle Messaging Platform

F360 — Founder / Studio Lead · 2021–2022

Led a high-detail 3D-scanning studio from capture through finished models.

MEGAVISOR / Gate9 — Technical Director & Co-founder · Oct 2011–May 2014

Led R&D for capture technology and equipment, photo-360 field workflows, Gate9 studio, and player features.
